

# INTRODUCING THE TOP PROSPECT FOR THE 2020 GROWING SEASON

# Prospect™

Arylex™ active

## HERBICIDE

Cleavers

Prospect + Glyphosate

Glyphosate alone

**Glyphosate alone is not enough. With growing concerns of glyphosate resistance, farmers need a robust tool that provides consistent performance and multi-mode of action control to delay the onset of herbicide resistance.**

- **Multi-Mode of Action Control:** Combined with glyphosate, Prospect™ delivers 3 overlapping modes of action (4+14+9) for effective resistance management
- **Consistent Performance:** Tank-mixed with glyphosate, this concept provides exceptional control of tough broadleaf weeds, including **overwintered cleavers** and flixweed
- **Confidence:** Faster and more complete weed control than glyphosate alone
- **Crop Safety:** Non-residual activity eliminates any risk to the emerging canola crop
